

How to Write Test Scenario..? Here are the Short Description of every Scenario Field:

- 1. Test Scenario:** This is the main idea of what you want to test. It tells you what part of the software you're checking.
- 2. Test Scenario ID:** A special number or code that helps you keep track of the test. Each test has its own ID.
- 3. Test Scenario URL:** A link or path that shows where you can find more details about the test scenario.
- 4. Test Scenario Description:** A brief explanation of what the test scenario does. It helps you understand what the test is about.
- 5. Number of Test Cases Passed:** This shows how many tests worked correctly and passed.
- 6. Number of Test Cases Failed:** This shows how many tests did not work correctly and failed.
- 7. Number of Test Cases Blocked:** This shows how many tests couldn't be run because something was blocking them.
- 8. Total Number of Test Cases:** This is the total number of tests for this scenario, including the ones that passed, failed, and were blocked.

This table helps you keep track of how well the software is working by organizing the tests and their results.
